PROFILE

Junior MERN Stack Developer with **6+ months** of hands-on professional experience building and deploying production-grade backend systems, optimized RESTful APIs, and responsive frontends. Skilled in JavaScript, TypeScript, and React.js, with deep expertise in secure database design, JWT/OAuth authentication architectures, and real-time WebSocket applications.

SKILLS

Languages & Core

JavaScript, TypeScript, OOP, Data Structures and Algorithm (DSA)

Databases

MongoDB, PostgreSQL, MySQL, Redis

Cloud & DevOps

Vercel, Render, Git, GitHub Actions (CI/CD basics)

Backend Frameworks

Node.js, Express.js

Frontend Frameworks

React.js, HTML5, CSS3, Tailwind CSS

Tools & Tech

Postman, Firebase, WebSockets (Socket.IO), Stripe, Nodemailer, Cloudinary

PROFESSIONAL EXPERIENCE

Backend Developer

Senew Tech

11/2025 – Present

Lahore, Pakistan

- Architected **backend infrastructure** for Opulence Music Group, implementing secure **JWT authentication** and automated workflows.
- Streamlined media management by integrating **cloud storage** for high-fidelity **MP3 uploads** and **low-latency streaming**.
- Developed core backend for Doveway, engineering multi-tiered **auth pipelines** and **Stripe identity verification**.
- Engineered secure payment architectures, incorporating **Stripe webhook listeners** and a custom **Split-Code verification system**.
- Optimized **MongoDB performance** through advanced **schema design** and **indexing**, reducing **API query execution times**.

Backend Development Trainee

ByteLift Solutions

07/2025 – 08/2025

Remote

- Built and tested robust backend APIs using Node.js, Express.js, and MongoDB to enhance core application functionality.
- Worked closely on database architecture design and backend logic debugging during rapid, test-driven development sprints.

PROJECTS

ShopNPay

Full-Stack E-Commerce Platform | React, Node.js, Express, MongoDB

06/2026 – Present

A scalable e-commerce platform managing production-grade user workflows from interactive product discovery to persistent carts and secure multi-step checkouts.

- Engineered 15+ robust RESTful API endpoints with dynamic server-side validation middleware, handling catalog retrieval, active sessions, and persistent carts.
- Secured user sessions via JWT stored in strict HTTP-only cookies, effectively eliminating unauthorized client-side token exposure to 0%.

- Integrated Stripe API and automated Nodemailer email verification pipelines with defensive server-side error handling to ensure 100% secure transactional cycles.

E-Learning Platform

12/2025 – 12/2025

Node.js, Express.js, MongoDB, React

An end-to-end learning management platform supporting role-restricted learning environments with rapid media delivery and performance-focused APIs.

- Architected Role-Based Access Control (RBAC) integrating JWT and Google OAuth to maintain distinct operational privileges for 3 user roles (Admin, Instructor, Student).
- Optimized data parsing logic and index queries for courses, interactive quizzes, and enrollments, keeping server response times consistently under 200ms.
- Streamlined high-volume assets by integrating Cloudinary storage for seamless video/image handling alongside transactional automated notification pipelines.

Running Tribe

11/2025 – 12/2025

Community App | Node.js, Express, MongoDB, Socket.IO

A real-time community engagement and event coordination ecosystem built to support continuous data streaming and multi-tier subscription models.

- Engineered a full-featured communication system utilizing Socket.IO, achieving zero packet drop during heavy stress testing over persistent WebSocket connections.
- Implemented automated Stripe Webhooks to dynamically manage and synchronize multi-tier user subscription layers instantly upon successful charge captures.
- Constructed role-restricted administrative middleware to safeguard sensitive event planning maps, preventing unauthorized mutations across 4 core database collections.

Social Media App

09/2025 – 10/2025

Node.js, Express.js, MongoDB

A backend-heavy networking application designed to simulate and manage high-density user activity feeds, profiles, and relationship schemas.

- Designed modular CRUD RESTful APIs utilizing Mongoose schema validations to manage extensive data payloads representing user-to-user interactions.
- Boosted query performance by 25% through targeted MongoDB compound indexing, heavily accelerating execution speeds for complex profile feed timelines.

EDUCATION

Bachelors in Information Technology

2022 – 2026

Virtual University of Pakistan

Lahore, Pakistan

CERTIFICATES

- Developing Back-End Apps with Node.js and Express – IBM (Coursera)
- Mastering Data Structure & OOP – Udemy

LANGUAGES

English

Professional Working Proficiency

Urdu

Native or Bilingual Proficiency
